Software Engineer

As a dedicated software engineer with 5 years of experience, I specialize in developing and maintaining enterprise applications. I thrive in dynamic environments and even with a hybrid work model, I consistently deliver high-quality results. Whether working independently with minimal supervision or collaborating effectively within a team, my adaptability shines.

Having navigated complex processes, I have honed my analytical skills, fostered collaboration, and strengthened my teamwork abilities. I eagerly look forward to continuous learning and enhancing my technical skills to tackle even more complex application development challenges in the future.

PROFESSIONAL EXPERIENCE

Infor PSSC, Inc.

Aug 2021 – Feb 2024

Software Engineer, Associate

2 yrs 7 mos

- As a member of a Scrum team, my responsibilities include designing and implementing features, as well as maintaining a cross-platform mobile application developed with ReactJS, Flux, Cordova, NodeJS, Java, and SQLite/SQL Server.
- One key lesson I have learned is the importance of thorough requirement reviews and technical analyses. By meticulously evaluating each feature, we can more accurately estimate the time and effort needed for implementation, which is crucial for meeting our commitments. For example, I was assigned a ticket that initially appeared straightforward but proved to be quite complex upon a deeper technical analysis. It affected multiple aspects of the mobile app. To tackle this, we segmented the ticket into several sub-tickets, which allowed us to handle the complexity in a more structured and effective manner.

Texas Instruments – RAJ Technologies, Inc.

June 2015–August 2019

Worked with a team to support and maintain web applications created primarily with Java(JSP), MySQL/PLSQL, and JQuery. Successfully addressed customer issues across multiple countries.

Software Engineer, Senior

6 mos

- I provided guidance to new teammates regarding support activities and led them through the transition of support responsibilities to a new contractor.

Software Engineer, Junior

4 mos

- I was assigned to assist in the development of a complex web application featuring interactive graphical functionality using HTML canvas. During this project, I honed my skills in debugging and resolving software bugs.

Software Engineer, Associate

1 yr 5 mos

- I began as an assistant to my teammates, helping them support their assigned applications. I quickly adapted to the tech stack and support processes, which led to me being assigned my own applications to maintain and support.

EDUCATION

Saint Louis University, Baguio City

B.S. Information Technology - 2019
