Software Engineer

A dedicated software engineer with over 4 years of experience in full-stack development and maintenance of web and mobile applications. Consistently produced quality output whether working independently with minimal supervision or collaborating effectively within a team. I eagerly look forward to continuous learning and enhancing my skills to tackle even more complex development challenges in the future.

SKILLS

Agile/Scrum | HTML & CSS | JavaScript | JAVA | PHP | SQL | React | jQuery | Node.js | Jasmine & Karma Coverage | Flux/Redux | Spring MVC | JSP | JUnit | MySQL | MS SQL Server | SQLite | Liquibase | Git & GitLab | Jira | Confluence

WORK EXPERIENCE

Infor PSSC, Inc.   Aug 2021 – Feb 2024

Worked with a scrum team to develop and maintain a feature rich cross platform mobile application developed using React, Flux, Node JS, SQLite, Java, and SQL Server. The mobile app is tightly integrated with an ERP, have offline capabilities, and have configurable dialogs or components.

Software Engineer, Associate   2 yrs 7 mos

- Performed technical analysis and collaborated with business analysts to design feature tickets.
- Implemented features with feature toggles and collaborated with QA to ensure product quality.
- Performed debugging and provided solutions to issues encountered by customers or QA.
- One key lesson I have learned is the importance of thorough requirement reviews and technical analyses. With effective analysis of each feature, we can more accurately estimate the time and effort needed for implementation, which is crucial for meeting our commitments. For example, I was assigned a ticket that initially appeared straightforward but proved to be quite complex upon a deeper technical analysis. It affected multiple aspects of the mobile app. To tackle this, we divided the ticket into several sub-tickets, which allowed us to handle the complexity in a more structured and effective manner.

Texas Instruments – RAJ Technologies, Inc.   Apr 2019 – Jun 2021

Worked with a team to support and maintain web applications created primarily with Java(JSP, Spring MVC), MySQL/PLSQL, and jQuery. We supported customers from manufacturing facilities across the globe communicating via email, chat, or calls to address their issues or concerns.

Software Engineer, Senior   6 mos

- Trained new teammates regarding support activities and led them through the transition of support responsibilities to a new contractor.
- Maintained and updated support process documentations.

Software Engineer, Junior   4 mos

- Assisted in the development of a complex web application featuring interactive graphical functionality using JSP, HTML canvas, and jQuery.
- Honed my skills in debugging and resolving software bugs.

Software Engineer, Associate   1 yr 5 mos

- Assisted my teammates in supporting their assigned applications.
- Quickly adapted to the tech stack and support processes, which led to me being assigned my own applications to maintain and support.

EDUCATION

Saint Louis University, Baguio City   B.S. Information Technology - 2018
